Dr. Muszynska lectures in Eastern Europe

During June and July 1994, Dr. Agnes Muszynska, Senior Research Scientist and Research Manager with Bently Rotor Dynamics Research Corporation, traveled to Poland and Slovakia to lecture at three Bently Nevada seminars. One seminar, "Vibration Monitoring and Malfunction Diagnostics of Rotating Machinery," was held in Modra, Slovakia and is the first Bently Nevada seminar to be conducted in Slovakia. Participants included diagnostic specialists from Slovakia, the Czech Republic and Hungary. Josef Toth, our sales engineer from Bratislava, Slovakia, simultaneously translated Dr. Muszynska's lectures into Slovakian.

Another seminar, "Introduction to

Diagnostics of Turbomachinery," took place in Baranowo, Poland. This seminar was attended by diagnostic specialists from several power plants, petroleum refineries and turbine manufacturers.

The third seminar, on selected problems on Rotor Dynamics and Vibrational Diagnostics in Rotating Machines, was held at the Technical University of Warsaw, Poland. This is the college where Dr. Muszynska received her Masters degree in Mechanical Engineering.

Dr. Muszynska also toured the Siekierki Power Station in Warsaw, Poland, where she met with diagnostic specialists and viewed turbine generator vibration data. ■
